

## AI: How Safe, How Smart?

The AI concept and technology have been ever-rising and being adopted dramatically by many people around the globe. Yet, with this flourishing technology and associated applications, there exit two philosophical and fundamental issues to be inspected or at least looked at. First, while countries and companies are competing in this race, how can we assure safe development and responsible use of the resulting applications and solutions? Second, do current approaches in developing and improving AI solutions really follow the right path or do we need to reconsider other directions and aspects towards the realization of real smart AI systems?

By Dr. Fadel Digham

- Chairman of Digital Transformation Study Group, at the International Telecommunications Union (ITU), UN
- Chief Expert at the National Telecom Regulatory Authority and Responsible AI Center of Egypt
- Recipient of the 2021 *IEEE Communication Society Award for Advances in Communications* (for best research impact over 15 years)
- Co-founder the IEEE global conference on AI & IoT (GCAIoT)
